SALIENT FEATURES OF THE PROJECT

PROJECT FACILITY DESCRIPTION

The 1050 MW capacity Maithon Right Bank Thermal Power Project consists of two (2) Units of 525 MW (2 x 525 MW) gross generating capacity each. The steam generators are of sub-critical design using pulverized coal as the main fuel. Light oil heavy fuel oil will be used for boiler light-up and initial load as well as for stabilizing of coal flame at lower boiler loads.

The pulverized steam generators will supply steam to respective Unit Steam Turbine Generators. The Steam Turbines are tandem compounded multi-cylinder reheat condensing extraction type machines and are coupled to synchronous 2-pole Generators (Alternators). High pressure steam from the Steam Generators enters the high pressure cylinder through HP Control and Stop Valves. The steam from HP cylinder exhaust goes to the boiler reheater for reheating and the reheated steam returns to the IP cylinder and passes through LP cylinders before rejecting its residual thermal energy to the condenser cooling water in the Condenser. During its expansion through the turbine, the steam is drawn at different stages for regenerative heating of feed water. The condensed steam from the condenser hotwell is pumped to deaerator through low pressure heaters. The hot water devoid of dissolve oxygen and air from the deaerator is sent to the steam generator for generation of steam through the boiler feed cycle thus completing the cycle.

The power generated at the Generator Terminal is stepped up to Grid voltage through Generator Transformers and sent to the Grid for onward transmission to the beneficiaries. The power required for running the Unit/ Station auxiliaries is drawn from the system before it is connected to the Grid. The export power at the Grid Interconnection Point is measured by Main and Check Meters. The power is evacuated at 220 kV and 440 kV voltage levels and transmitted to the beneficiaries through the relevant transmission systems.

The coal, the main fuel, arrives at site through the rail infrastructure created for the purpose. A dedicated system of rail infrastructure has been installed for the plant and is connected to the Eastern Railway system for transporting the coal from linked mines to the plant site. The coal received in BOBR wagons is unloaded in the track hopper and conveyed to Unit coal bunkers or to coal stockyard.

The make-up water for the plant is drawn from the Maithon Reservoir through its own intake system. The water is used for various services in the plant. The major portion is used for makeup for the Condenser Circulating Water System which a closed loop system with

Cooling Towers. Waste water is treated in the Effluent Treatment Plant and used for miscellaneous services like gardening etc., thereby resulting in Zero-Discharge system to obviate any water pollution in the area.

The ash generated as a result of firing coal in the boilers is disposed of in dry and wet form. The dry fly ash is given to its users such as cement and brick industry. The balance dry fly ash and also bottom ash from the settling ponds is planned to be dumped in the abandoned coal mines in an eco-friendly manner.e

8.1 The Seller irrevocably agrees and consents (to the extent to which Applicable Law may require such consent) to any actions of the Lenders, the Lender's Representative and the Buyer or exercise of their rights under and in accordance with these terms.

8.2 The Seller irrevocably agrees and consents (to the extent to which Applicable Law may require such consents) that from the date specified in Clause 7.9, it shall cease to have any rights under this Agreement or the Financing Agreements other than those expressly stated therein.

8.3 The Seller warrants and covenants that any agreement entered into by the Seller, in relation to the Project, shall include a legally enforceable clause providing for automatic novation of such agreement in favour of the Selectee, at the option of the Lenders or the Buyer. The Seller further warrants and covenants that, in respect of any agreements which have already been executed in relation to the Project and which lack a legally enforceable clause providing for automatic novation of such agreement, the Seller shall procure an amendment in the concluded agreement to incorporate such clause.

9. **Interim Protection of Service and Preservation of Security**

9.1 Appointment of a Receiver

9.1.1 In every case of the Lenders issuing a Substitution Notice and the Buyer refusing to takeover the Project and the Seller failing to operate the Project in accordance with Clause 4(c) above and the Buyer not electing to act as Receiver as per sub-clause 9.1.1A hereof, the Lenders may institute protective legal proceedings for appointment of a receiver (the "Receiver") to maintain, preserve and protect the assets held as security by the Lenders if such right is granted under the terms of the Financing Agreements.

9.1.1A If the assets of the Project are, in the opinion of the Buyer, necessary and required for the operation and maintenance of the Project, the Buyer shall be entitled to elect to act as the Receiver for the purposes of this Clause and be entitled to maintain, preserve and protect the said assets by engaging an operator/service provider to act on their behalf and the Lenders and Seller hereby consent and agree to the same. Upon the Buyer so intimating the Seller and the Lender's representative its desire to

act as Receiver, the Seller and the Lender's representative shall co-operate with the Buyer to facilitate the same.

9.1.2 Upon appointment of the court appointed Receiver or the Buyer acting as Receiver, all the receivables received by such Receiver shall be deposited by the Receiver in the bank account jointly designated by the Buyer and the Lenders. The Receiver shall be responsible for protecting the assets in receivership and shall render a true and proper account of the receivership to the lenders in accordance with the terms of its appointment.

9.1.3 When acting as a Receiver or operator in accordance with this Clause 9 or Clause 4(b), Buyer shall be entitled to be remunerated for such services as may be determined by CERC. Furthermore, when acting as a Receiver, the Buyer shall not be liable to the Lenders, the Lenders' Representative, Seller or any third party for any default under this Agreement, damage or loss to the Power Station or for any other reason whatsoever, except for willful default of the Buyer.

10. Substitution Consideration

10.1 The Lenders and the Buyer shall be entitled to appropriate any consideration received for the substitution of the Seller as hereinabove provided, from the Selectee towards the payment of Lenders' and the Buyer's respective dues, and balance, if any, shall be paid to the Seller.

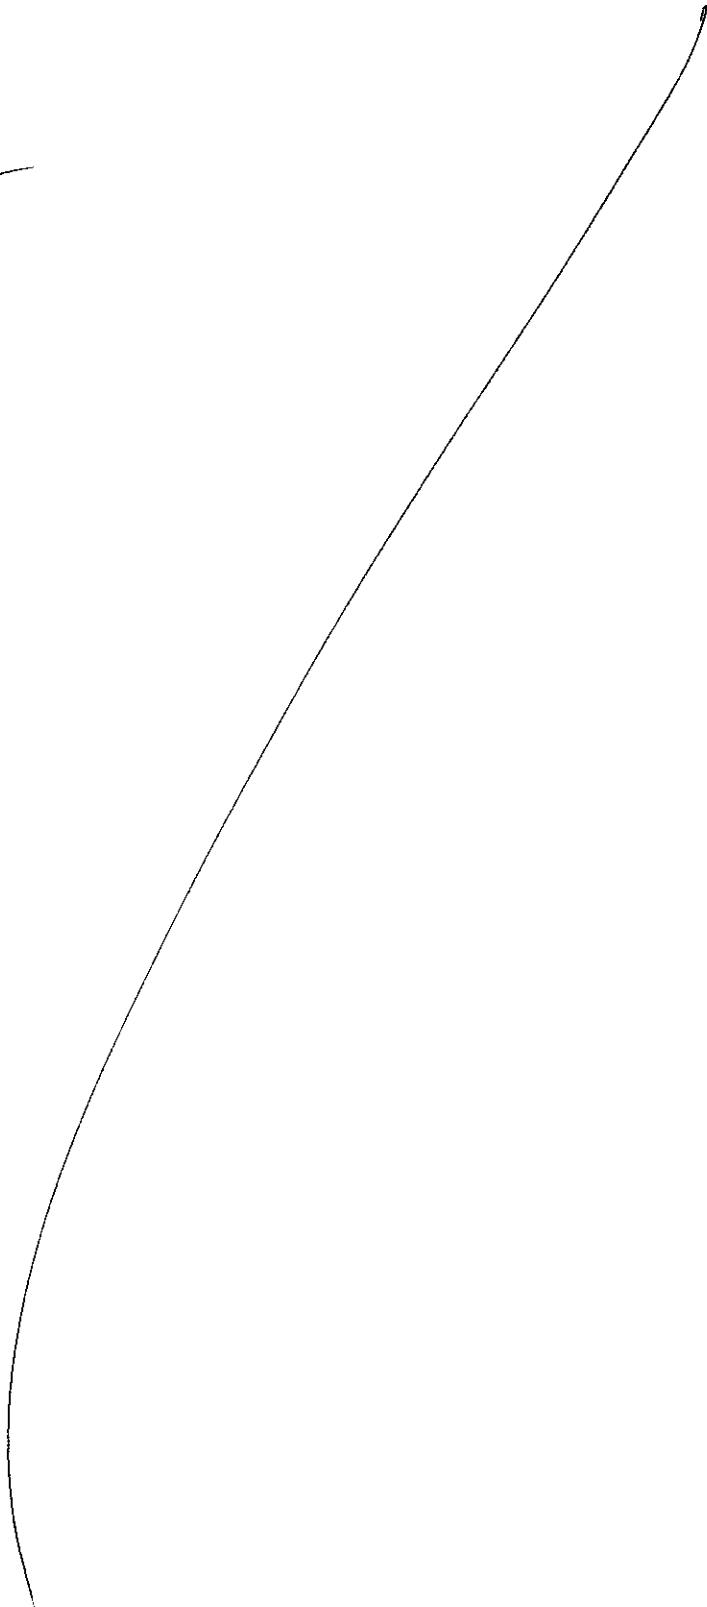

10.2 The Seller shall be deemed to have nominated, constituted and appointed the Lenders' Representative as its constituted attorney for doing all acts, deeds and things as may be required to be done for the substitution of the Seller by the Selectee pursuant to these terms.

11. Change in Buyer or Lenders

The Parties hereto acknowledge that during the subsistence of this Agreement, it is possible that the Buyer may cease to be a Party to this Agreement by reason of termination of this Agreement vis-à-vis the Buyer and any Lender may cease to remain as a Lender by reason of repayment of the debt or otherwise. Further it may be possible that any Lender may be substituted or a new Lender may be added. In the event of the Buyer ceasing to be a Party to this Agreement or the Lender a party to the Financing Agreements respectively, the term and conditions as prescribed in this Schedule shall cease to automatically apply to the Buyer or Lender as the case may

be. Further, upon any entity being added as a Lender and in the event such entity is given the right to substitute the Seller under the Financing Agreement, then the contents of this Schedule shall be applicable to the exercise of such right by the said new entity.

SCHEDULE E
COMMISSIONING AND COMMERCIAL OPERATION OF THE PROJECT

1.0 Commissioning

Commissioning of a Unit/Project refers to the process of putting into service successfully all the auxiliary systems of the Unit/Project in the required sequence leading to its integrated operation and connection to the Grid. Each Unit shall be required to be commissioned by the Seller in accordance with manufacture's recommendations, requirements specified in EPC Contracts and as per the Prudent Utility Practices.

2.0 Trial Operation

Initial integrated operation of a Unit at varying loads to study and establish its behavior and to stabilize the operation of each equipment and system/sub-system is referred to as the trial operation (the "**Trial Operation**") of that Unit. The Unit shall then be operated at full rated capacity to establish satisfactory operational performance with satisfactory functioning of all controls and systems in a well coordinated manner. Trial Operation shall generally be for a period of thirty (30) days.

A minimum of following Unit characteristic tests may be carried out during Trial Operation:

- Turbine governor system response;
- Ramping rate tests by loading and unloading the Unit at specified rates in MW/minute;
- Load throw-off test (subject to Grid conditions permitting);
- Generator excitation system response time and AVR sensitivity; and
- Other tests in accordance with manufactures' recommendations and the requirements of BTG Agreement.

3.0 Reliability Operation

3.1 Continuous initial operation of a Unit at its MCR for a continuous period of at least seventy two (72) hours is referred to reliability operation of the Unit (the "**Reliability Operation**"). After successful Trial Operation at rated capacity, Reliability Operation will be carried out.

3.2 Successful completion of Reliability Operation will establish the capability of the Unit to run at its MCR without interruption and the Unit would be deemed to have passed the capacity test (the "Capacity Test").

4.0 Commercial Operation of the Unit

On successful Reliability Operation of the Unit, commercial availability of the Unit will be declared by the Seller. The date of such declaration will be notified to the Buyer.

5.0 Witnessing of Reliability Operation/Capacity Test by the Buyer

5.1 The Seller shall give fifteen (15) days notice to the Buyer notifying it of the scheduled/rescheduled date of conducting the Reliability Operation/Capacity Test of the Unit.

5.2 The Buyer may witness the Reliability Operation/Capacity Test of the Unit at his own cost. Failure on the part of the Buyer to witness the tests on the scheduled/rescheduled date shall not affect the declaration of Commercial Operation Date by Seller, and under any situation, the date so declared by the Seller shall be the date for start of receipt of power by the Buyer as per terms and conditions of this Agreement.

6.0 Failure of a Unit to achieve Maximum Continuous Rating

In case the Unit fails to achieve its MCR during Trial Operations, the EPC Contractors shall rectify the faults and try to achieve the MCR capacity. In case the repeated trials fail to achieve the desired capacity, Reliability Operation will be carried out at the achievable capacity and COD of the Unit may be declared at the new capacity (the "Revised Installed Capacity") which is lower than the Installed Capacity and the Tariff shall be determined in accordance with Tariff Regulations, 2004. Acceptance of lower Revised Installed Capacity of the Unit shall be in accordance with the terms and conditions of the BTG Agreement.

7.0 Performance Guarantee Tests

7.1 The tests to prove the guaranteed performance of the Units (the "Performance Guarantee Tests") by the BTG Contractor shall be conducted after COD of the Unit

after having attended to all the punch-list items and deficiencies of auxiliary equipment. The Performance Guarantee Tests shall be carried out strictly in accordance with the applicable and agreed ASME Power Test Codes. Due notice shall be given to the Buyer/RLDC of the planned tests along with schedule of testing to enable them to provide required shutdown of the Unit for installing test instruments and to provide required Grid conditions during the period of testing.

8.0 Status of Compliance to requirements of Commissioning and Commercial Operation of the Project.

The Unit 1 is declared in the Commercial Operation since 10.09.2011 & Unit 2 is declared in Commercial Operation since 24.07.2012, in terms of the regulation 2 (12) of the CERC Tariff Regulation.

The Performance Guarantee Test of the BTG package on the Unit 1 was conducted from 02 to 04.03.2013 jointly by the Seller and M/s BHEL. The Performance Guarantee Test on the Unit 2 was conducted from 20 to 22.03.2013 jointly by the Seller and M/s BHEL.

The Units are tested for installed Capacity 525 MW each on Units 1 and 2
